Solve the following fraction calculations.

a) $\dfrac{5}{7} \times \left(\dfrac{3}{5} - \dfrac{5}{11}\right) = \dfrac{8}{77}$

b) $\dfrac{1}{2}2 - \dfrac{1}{8} \div 2 = \dfrac{3}{16}$

c) $2\dfrac{1}{3} \times \left(\dfrac{5}{9} - \dfrac{1}{18}\right) \div 3 = \dfrac{7}{18}$

What different calculations can you make using each card only once?.

| 1 | 2 | 5 | 6 | 8 |

$$\frac{\boxed{}}{\boxed{}} \times \boxed{} + \frac{\boxed{}}{\boxed{}}$$
