

Thursday

Example

$$\frac{3}{4}$$

The numerator (top number) tell you how many parts you need.

The denominator (bottom number) tell you how many parts the whole has been split into.

Fill in the blanks.

$$\frac{1}{4} \text{ of } 12 = 3$$

$$\frac{\boxed{2}}{4} \text{ of } 12 = 6$$

$$\frac{3}{\boxed{4}} \text{ of } 12 = \boxed{9}$$

Find $\frac{3}{4}$ of these amounts.

$$\frac{3}{4} \text{ of } 8 = 6$$

$$\frac{3}{4} \text{ of } 4 = 3$$

$$\frac{3}{4} \text{ of } 20 = 15$$

$$\frac{3}{4} \text{ of } 16 = 12$$

$$\frac{3}{4} \text{ of } 24 = 18$$

What juicy mistake has Miss Burnett made?

Miss Burnett's mistake is she only circled one group so she only found $\frac{1}{4}$. She should have circled 3 groups to find $\frac{3}{4}$ and the answer would have been 30.
